TracPipe

TracPipe is a flexible stainless steel piping material used for natural gas and propane installations. TracPipe is currently in use for gas piping systems in single and multi-family residential as well as commercial and industrial buildings. TracPipe's superior corrugated tubing coupled with AutoFlare fittings combine to make the best CSST product available. TracPipe's full range of sizes (3/8" to 2") and proven reliability make it the first choice at all residential, commercial and industrial job sites.

AutoFlare Fittings

AutoFlare fittings are designed to function specifically with TracPipe. AutoFlare is the only fitting that is self-piloting and self-flaring to the pipe's inner diameter. AutoFlare even self-corrects for out of round cuts. This gives you a fast, reliable and reusable fitting that seals right the first time...every time.

CounterStrike

This is a second generation product that is an effective but affordable tool in increasing the protection of CSST gas piping systems from the damage caused by nearby, indirect lightning strikes. CounterStrike is a patented CSST that is engineered to significantly decrease the potential for lightning induced damage to fuel gas piping systems. CounterStrike has been designed with a proprietary jacket material in place of the standard yellow jacket. This black jacket has energy dissipating properties that will help protect the stainless steel pressure liner as well as other fuel gas system components if the CounterStrike becomes energized due to lightning. CounterStrike has been shown to be 50 times more resistant to the damaging effects of electrical energy than conventional TracPipe.

TracPipe PS-II - The Underground System

TracPipe PS-II is a pre-sleeved one step gas installation system for underground, rooftop or exterior wall applications. It can be installed under buildings, slabs, roads or driveways. It is perfect for gas installations in a variety of applications where speed, reliability and safety are paramount. TracPipe PS-II flexible gas piping is constructed from standard TracPipe stainless steel flexible gas pipe sleeved in a polyethylene sleeve that acts as a vented containment system. TracPipe PS-II is supplied in standard lengths on reels.
